American Biogas Council Launch New, Interactive American Biogas Industry Directory

WASHINGTON – The American Biogas Council proudly announced the launch of the American Biogas Industry Directory - a new, online, interactive member listing that houses comprehensive information on ABC's 140+ member companies. Publicly announced at the AgSTAR Conference in Syracuse, NY last week, the directory is a one-stop shop for anyone looking to learn more about the services ABC member companies have to offer, the industries that they serve or simply to learn more about which companies are operating in the biogas space. Now easily accessible on ABC's website, the American Biogas Industry Directory is a resourceful tool with many benefits in that it improves networking capabilities and readily connects businesses with prospective customers.

The Directory has an easy-to-use search feature that allows visitors to focus their inquiry by pulling a subset of companies based on customer type, industry type and/or state/province. Furthermore, members of the American Biogas Council have the added benefit of accessing more details about each company listed through the members' only section of the Council's website. "This is the first free, publicly available biogas industry directory that exists" says ABC Executive Director, Patrick Serfass. "It's only going to keep expanding and becoming a wealthier resource as our membership continues to grow." The American Biogas Industry Directory is one of many initiatives that the ABC has planned for 2012, in an effort to continue providing first-class services and resources to its members.
